Creating Graphs from Progress Reports

Follow the steps in this tutorial to create graphs from your semi-annual OVW program progress reports using Microsoft Excel. The graphs in the tutorial show one way program data may be presented visually; choose information that best tells your program's story. Once your graphs are created, they can be included in program websites, reports, or printed out for distribution to Tribal Councils.

Pie Charts

When to create a pie chart:

Use a pie chart to show or compare parts of a whole, meaning the sum total should equal 100%. Pie charts are most helpful when you want to compare 2-3 categories. They do not show changes over time. **Example:**

Deer Nation wants to compare the number of survivors by victimization who were served by their program in the year 2020. Follow the steps below to make this chart.

Tostart, you need to enter a label to describe what information is being presented in the graph. For this example, we are going to type "Total Served and Partially Served" in cell B1 (leave A1 blank). The title you place here will show up as the name of your graph

Bar Charts

When to create a bar chart:

Bar charts are used to compare differences between groups or to show changes over time. However, when trying to measure change over time, bar charts are best when the changes are larger.

Example:

Deer Nation wants to compare the number of survivors by race/ethnicity who were served/partially served by their program in the year 2020. Follow the steps below to make this chart.

Tostart, you need to enter a label to describe what information is being presented in the chart. For this example, we are going to type "Victims/Survivors by Race/Ethnicity" in cell B1 (leave A1 blank). The title you place here will show up as the name of your chart.

Line Graphs

When to create a line graph:

Line graphs are used to show changes over short and long periods of time for one or more categories. Line graphs are better at showing small changes over time than bar charts are.

Example:

Deer Nation wants to compare the total number of survivors who were served/partially served by their program in the years from 2016 to 2020. Follow the steps below to make this chart.

Tostart, you need to enter a label to describe what information is being presented in the graph. For this example, we are going to type "Total Served and Partially Served" in cell B1 (leave A1 blank). The title you place here will show up as the name of your graph
